Project Title

E-STORE FOR MOBILE APPLICATION

Abstract:

This project makes it easy to distribute/sell mobile applications worldwide. Mobile application developers can upload their applications on this website. They can freely distribute their application or they can charge money for that. User can also browse the eStore to find hundreds of thousands of mobile applications. The users can download mobile applications for free or paid. User can also provide his feedback/rating for the mobile app. This project specifically combines all applications of various mobile OSs like Android, Symbian, iOS etc. which provide universal platform to the user to download apps and many more stuff. Also provide the Search engine to find the application which user instantly need. This System will be open source so any one can register their account free of charge and can enjoy the apps store easily. There are more than 30 million people around the world who can access the internet daily. It becomes necessary that every devices running with application inside.
