## **SMT. S. R. PATEL ENGINEERING COLLEGE, UNJHA**

**Project Title**

**ONLINE COURIER MANAGEMENT**

### **Abstract:**

Online Courier services are a more specialized delivery service that businesses and individuals turn to when they need a package or a document to reach its destination quickly. While regular mail services can also deliver packages rapidly, they cannot guarantee same day delivery or overnight delivery as the case may be.

The term “courier service” can refer to every form of delivery or transport service ranging from a small, local operation to an international network servicing millions daily using a fleet of trucks, planes, trains and ship. Courier services have been around for a very long time. Ancient cultures had runners or horsemen to carry messages from one place to another without the hassle of going through the more commonly used slow channels. Another reason that couriers

became such an important fixture in the delivery sector is that they were able to provide greater security to a parcel or letter.

Technically, courier services are not supposed to be able to lose a letter given their intricate tracking systems. Online Courier Management is developed for professionals who want their work to be organized which will lead them to achieve their goals.
