Project Title

COMMERCIAL MEDIA FOR OPENERP

Abstract:

There are very few apps related to handle whole business through mobile. But there is no any apps available used to get the business details by notification using android with ERP synchronization. In business there are problems to live in updated area. These are, like to get the updated information in the sense newly available version of software & hardware, any product related information, any sales etc. This is not possible for every user/client to get all necessary details by mobile.

Commercial media which is used for business application. The user can get any information for their concern business by mobile. It's main task is to provide the notification related to each & every business modules.

Modules: Project Management, Sales, CRM, Manufacturing, Human Resource, Purchase, Warehouse etc.

It's single direction communication with ERP. The only connected users can get their notification, others who are not related to their particular business, they can't interact with this system. The user can get any information for their concern module or service by mobile.

They can use and access their services like sales, purchase order, product details & access web services. They just login by their name only once who are connected within their business. It is done by web services access like sales order, purchase.

It is one type of mobile portal.

The following user can registered.

- o Customer: They can access their services.
- o Supplier
- o Purchaser
- o Project Employee
- o Manager
